Micro Tuner model *RaceME*
Common Rail Dodge Ram
6.7L, 24 Valve, Cummins Diesel Engine

Instruction Manual

PLEASE READ THIS ENTIRE INSTRUCTION MANUAL BEFORE PROCEEDING

www.raceme.eu

Rev. 1.00A

THIS IS A HIGH PERFORMANCE PRODUCT USE AT YOUR OWN RISK

This product is intended for OFF ROAD USE ONLY with NON standard exhaust trucks
This product is not intended to be used to break the law

Do not use this product until you have read the following agreement.
This agreement sets forth the terms and conditions for the use of this product.
The installation of this product indicates that the buyer has read and understands this agreement and accepts the terms and conditions.

DISCLAIMER OF LIABILITY

RaceME, its distributors, jobbers and dealers (hereafter Seller) shall be in no way responsible for the product's proper uses and service. THE BUYER HEREBY WAIVES ALL LIABILITY CLAIMS.

The buyer acknowledges that he is not relying on the Sellers skill or judgement to select of furnish goods suitable for any particular purpose and that there are no liabilities which extend beyond the description on the face hereof, and the buyer hereby waivers all remedies or liabilities expressed or implied, arising by law or otherwise (including without any obligation of the seller with respect fitness, merchantability and consequential damages) whatever or not occasioned by the sellers negligence.
The Seller disclaims any warranty and expressly disclaims any liability for personal injury and damages. The buyer acknowledges and agrees that the disclaimer of any liability for personal injury is a material term for this agreement and the buyer agrees to indemnify the Seller and to hold the Seller harmless from any claim related to the item of the equipment purchased. Under no circumstances will the seller be liable for any damages or expenses by reason of use or sale of any such equipment.

The Seller assumes no liability regarding the improper installation or misapplication of its products.
It is the installer's responsibility to check for proper installation and in doubt contact the manufacturer.

The buyer is solely responsible for all warranty issues from the manufacturer.

LIMITATION OF WARRANTY

RaceME (Hereafter Seller) gives Limited Warranty as to description, quality, merchantability, and fitness for any particular purpose, productiveness, or any other matter of the Seller's product sold herewith. The Seller shall be in no way responsible for the products proper use and service and the buyer hereby waives all rights other than those expressly written herein. This warranty shall not be extended, altered or varied except to be a written instrument signed by Seller and Buyer.

The warranty is limited to one (1) year from the date of sale and limited solely to the parts contained within the products kit. All products that are in question of warranty must be returned prepaid to the Seller and must be accompanied by a dated proof of purchase receipt. All Warranty claims are subject to approval by RaceME.

Under no circumstances will the Seller be liable for any labor charged or travel time incurred by in diagnosis for defects, removal, or reinstallation of this product or any other contingent expenses.

Under no circumstances will the Seller be liable for any damage or expenses incurred by reason of the use or sale of any such equipment.

In the event that the buyer does not agree with this agreement: THE BUYER MAY PROMPTLY RETURN THIS PRODUCT, IN A NEW AND UNUSED CONDITION, WITH A DATED PROOF OF PURCHASE TO THE PLACE OF PURCHASE WITHIN TEN (10) DAYS FROM THE DATE OF PURCHASE FOR A FULL REFUND.

THE INSTALLATION OF THIS PRODUCT INDICATES THAT THE BUYER HAS READ AND UNDERSTANDS THIS AGREEMENT AND ACCEPTS THE TERMS AND CONDITIONS.

CAUTION

This *RaceME* product is intended for use on unmodified stock engines. Remove any performance enhancing electronic devices and make sure the ECM has been returned to STOCK if you have used another manufacturer's programmer before the RaceME Micro Tuner.

The use of this product to change the performance characteristics of your vehicle could invalidate the warranty provided by the vehicle manufacturer. Consult your vehicle warranty before using the product on your vehicle.

NEVER CONNECT BOTH THE RaceME CONNECTORS AT THE SAME TIME!
This could damage RaceME and the computer USB port.

NEVER UNPLUG RaceME WHILE IT IS UPDATING YOUR ECM.
RaceME can recover without pulling fuses, or disconnecting batteries, BUT do not intentionally create this situation. When RaceME is DONE with ECM updates, ABS changes, or clearing DTC codes, it may be unplugged, even if RaceME does not display the typical "Unplug RaceME and Turn Key OFF" screen.

It is recommended that you do not store your RaceME Micro Tuner in your vehicle if ambient temperatures in your area fall below 32°F. Excessively low temperatures can cause malfunction or damage to RaceME Micro Tuner that is not covered by the RaceME warranty.

In the case of ECM replacement, restore the ECM back to the STOCK software before the ECM replacement. RaceME works only with one vehicle and one ECM at a time while it is VIN Locked.
Under no circumstances we will refund, repair, or warranty units that are send in and result VIN # locked.

RESTORE ECM TO STOCK SOFTWARE BEFORE ANY SERVICE ASSISTANCE.
If you need to return your vehicle to a service center, restore the vehicle ECM to its STOCK program by following the instruction in this manual. The service center might reprogram your vehicle with an updated, STOCK, software ECM reflash **without** your knowledge. If your vehicle has not been returned to its STOCK program prior to a service visit and the ECM is reflashed, the RaceME Micro Tuner will no longer be able to program your vehicle. Such failure is not covered by the *RaceME* warranty. Under no circumstances will we refund, repair, or warranty units that are sent in that are locked.

Index

1. Before You Begin

Your vehicle's STOCK program

Your vehicle's ECM **must** contain the manufacturer's STOCK factory program. If you have used a programmer from another aftermarket company you must use their product to return your ECM back to STOCK condition before proceeding. If you have a performance-enhancing device installed, it must be removed.

Service Centers

If you need to return your vehicle to a service center, restore the vehicle ECM to its STOCK program. The service center might reprogram your vehicle with an updated, STOCK, software ECM reflash **without** your knowledge. If your vehicle has not been returned to its STOCK program prior to a service visit and the ECM is reflashed, the RaceME Micro Tuner will no longer be able to program your vehicle. Such failure is not covered by the RaceME warranty.

Under no circumstances will we refund, repair, or warranty units that are sent in that are locked.

Locking and Unlocking RaceME.

Once RaceME is used on a vehicle, it is VIN # LOCKED to that vehicle AND to that ECM. RaceME can be used only on that vehicle to update ECM software and ABS (speedometer) changes. In order to unlock RaceME, you must use RaceME to return the ECM to the STOCK software, otherwise, RaceME will remain locked. Only RaceME can unlock itself. Follow the instructions in this Manual to return your vehicle to STOCK software. Once unlocked, RaceME may be used on a different vehicle. While RaceME is VIN# Locked, it can still be used to read and clear Diagnostic Trouble Codes (DTCs) on a vehicle and ECM that it is NOT locked to.

Vehicle preparation

Before connecting the RaceME Micro Tuner to your vehicle, make sure that all power-draining accessories are turned off: Radio, headlights, lights, cell phones, etc. All those devices need to be turned off. Please apply the parking brake before you begin a download.

As the RaceME Micro Tuner needs full battery voltage to program, ensure your vehicle battery is fully charged and NOT connected to a battery charger.

Do not disturb or remove the connection cable during the updating operation.

RaceME preparation

During the first use, RaceME reads the identification parameters of your vehicle. After the first use, RaceME can be used only with your vehicle.

Returning the ECM to STOCK software restores RaceME into the original, unlocked condition.
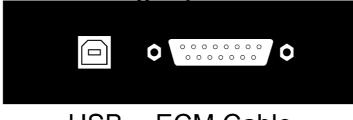

2. RaceME Overview

Keyboard operation

RaceME's keyboard is composed of 4 keys:

* Right arrow key, used to confirm the selected operation
* Left arrow key, used to go one step back in the operation flow
* Up and down arrow as function select

Connectors

Two connectors are available in RaceME's upper edge:

USB   ECM Cable

- USB Connector: Used for connecting RaceME to a personal computer for updates. The update softwares can be downloaded from *RaceME* internet site (www.raceme.eu).
  A USB cable is not included. Standard USB 1.1 or USB 2.0 cables, with maximum length of 1.5m, can be used to connect RaceME to your personal computer.
- 15 pin Connector: Used to connect RaceME to the vehicle through the vehicle's diagnostic port with an OBD II cable. The OBD II – J1926 diagnostic connector cable is included in RaceME's box. Note: Connecting any other cable to the 15 pin connector invalidates *RaceME* warranty, because it could damage RaceME.

RaceME automatically switches on when one of the two connections described above is made.
NEVER CONNECT BOTH CABLES AT THE SAME TIME. This could damage RaceME and the computer USB port. Such failure is not covered by the *RaceME* warranty

3. Connecting RaceME to your vehicle

- Turn on the ignition key to the RUN position. DO NOT START THE ENGINE.
- Plug the furnished OBD II cable into the 15 pin connector in the top edge of RaceME and GENTLY tighten the screws by hand. Over tightening these two screws DOES NOT make a tighter or better connection. The screws are provided to keep the plug held gently to RaceME.
- Plug the RaceME cable into the diagnostic port on your vehicle. The diagnostic port is located inside the cab, to the passenger side of the steering wheel, at the bottom of the dash panel near the floor.

4. Updating the ECM

First time update

Turn on the ignition key to the RUN position. DO NOT START THE ENGINE.
Plug RaceME's cable into the diagnostic connector of your vehicle. RaceME will display:

```
       RaceME
   V:6.00A  D:1.00A
```

The second line of the display shows the firmware version and the tuning data version.
Both the internal firmware and the tuning data information can be updated connecting a personal computer. (See *RaceME* internet site for more details.) Then the main menu appears:

```
   ▲ ECM Update
   ▼ Data Read
```

From the main menu, press ▲ to select *ECM Update*.
Then the Options menu appears:

```
   ▲ Connect Truck
   ▼ Adjust options
```

From the Options menu, press ▲ to select Connect Truck.
RaceME will try to communicate with the ECM. If the connection cannot be established, RaceME asks you to switch off the ignition key:

```
     Turn key OFF
      Press  ▶
```

Turn the ignition key to "OFF". ▶ Press the key. RaceME will then ask you to switch the ignition key "ON" in order to retry the connection:

```
     Turn key ON
      Press  ▶
```

Turn the ignition key to the "RUN" position. DO NOT START THE ENGINE. Press the ▶ key. When the connection has been established, RaceME shows the current installed software. During the *first* programming, the following screen will appear which indicates a STOCK ECM program is installed:

```
Present SW:STOCK
Press  ▶
```

RaceME will read the serial number of your vehicle and the serial number of your ECM, then store them into its onboard memory for future reference. From this moment on, RaceME will work only with your vehicle until your vehicle is restored back to the stock settings by RaceME.

Press the ▶ key. RaceME will ask you to select one of the software versions to load into the ECM:

```
Level Selection:
3 . Performance
```

You can choose one of three different software versions according to the desired performance. Use the up and down arrow to select the software level, that corresponds with the software number to be programmed into your ECM. When you have selected the preferred software number press the ▶ key to confirm your selection and to begin the updating session.

Furthermore you can choose the Standard software level, that is Stock but the tire diameter adjustment is possible.

After the checking phase, the programming starts with the following screen:

```
PROGRAMMING
Please wait
```

After a few seconds, a numeric counter begins with the percentage of the transmitted software. At the end of the download (when 100% is reached) RaceME will update the functional parameters of the ECM. Typical programming time is two minutes. The following screen will appear:

```
Updating ECM
Please wait
```

During the updating session, RaceME can ask to Turn key OFF and Turn Key ON. Please follow these instructions. DO NOT DISCONNECT RaceME before the updating session is completed.

At the end of the updating session, the following screen appears:

```
UPDATE DONE
Unplug RaceME
```

Please unplug RaceME from the diagnostic port and turn the Key off for 15 seconds.
Remember to restore the STOCK software before returning your vehicle to a service center.

Changing Software

Turn on the ignition key to the RUN position. DO NOT START THE ENGINE.
Plug RaceME's cable into the diagnostic connector of your vehicle. RaceME will display:

```
#  RaceME #
V:6.00A  D:1.00A
```

When the " # " symbols are displayed on the first line, RaceME is VIN# locked to a vehicle.
The second line of the display shows the firmware version and the tuning data version.
After a few seconds the PoD menu will appear:

```
▲ Power On Demand
▼ Main menu
```

Press the ▼ key to select the main menu:

```
▲ ECM/ABS Update
▼ Data Read
```

Once RaceME is VIN# Locked, the ABS control system can be accessed in order to correct the wheel height. Press ▲ the key, and RaceME displays the following screen:

```
  ▲  ECM Update
  ▼  ABS Update
```

Press the ▲ key to select *ECM Update*. Then the Options menu appears:

```
  ▲  Connect Truck
  ▼  Adjust options
```

From the Options menu, press ▲ to select Connect Truck.
RaceME will try to communicate with the ECM. If the connection cannot be established, RaceME asks you to switch off the ignition key:

```
    Turn key OFF
    Press  ▶
```

Turn the ignition key to "OFF". Press the ▶ key. RaceME will then ask you to turn on the ignition key in order to retry the connection:

```
    Turn key ON
    Press  ▶
```

Turn the ignition key to the "RUN" position. DO NOT START THE ENGINE. Press the ▶ key. When the connection has been established, RaceME shows the currently installed software.
After the first update, the following screen will appear displaying the software currently installed in the ECM: (See example below for RaceME software #2).

```
  Present SW: 2
  Press  ▶
```

Press the ▶ key to enter in the software level selection:

```
  Level Selection:
  X . Stock
```

You can choose one of three different software versions according to the desired performance or select the stock software. Use the up and down arrow to select the software level, that corresponds with the software number to be programmed into your ECM. When you have selected the preferred software number press the ▶ key to confirm your selection and to begin the updating session.
After the checking phase, the programming starts with the following screen:

```
    PROGRAMMING
    Please wait
```

Return to STOCK program
Selecting 'X – STOCK', the ECM is restored to STOCK software and RaceME is unlocked. RaceME can now be used on another vehicle.
You can also select "0 - Standard", the ECM is programmad to STOCK software but RaceME remains VIN# locked. In this way the tire diameter can remain modified.

Change software programs
You can choose one of three different software versions according to the desired performance. Use the up and down arrow to select the software level, that corresponds with the software number to be programmed into your ECM. When you have selected the preferred software number press the ▶ key to confirm your selection and to begin the updating session.
Furthermore you can choose the Standard software level, that is Stock but the tire diameter adjustment is possible.
After the checking phase, the programming starts with the following screen:

```
          PROGRAMMING
          Please wait
```

After a few seconds, a numeric counter begins with the percentage of the transmitted software. At the end of transmission (when 100% is reached), RaceME will update the functional parameters of the ECM. Typical programming time is two minutes. The following screen will appear:

```
          Updating ECM
          Please wait
```

During the updating session, RaceME can ask to Turn key OFF and Turn Key ON. Please follow these instruction. DO NOT DISCONNECT RaceME before the updating session is completed.
At the end of the updating session, the following screen will appear:

```
          UPDATE DONE
          Unplug RaceME
```

Please unplug RaceME from the diagnostic port and turn the key of for 15 seconds.

Recovery of the ECM

If an interruption occurs during an Update or the Update operation is terminated before the normal end for any reason the ECM will not be operational. You must recover the ECM using RaceME to resume the update process.

Attention! The engine will not start before the ECM has been recovered properly!
(The Wait to Start Light will flash continuously)
DON'T PANIC!

RaceME has developed a special boot loader software that is used during all the ECM Updates. Unlike the OEM DRBIII tool, there is no need to pull fuses or disconnect the batteries! No tools are needed!
At *RaceME* we've done our homework!
Just follow the directions on RaceME's display.
RaceME will handle the situation for you in a few simple steps.
Unplug RaceME, then, plug it in again. After a few seconds the usual main menu will appear.

```
       ▲ ECM/ABS Update
       ▼ Data Read
```

Press the ▲ key, and RaceME displays the following screen:

```
       ▲ ECM Update
       ▼ ABS Update
```

Press the ▲ key to select *ECM Update*.
Then the Options menu appears:

```
       ▲ Connect Truck
       ▼ Adjust options
```

From the Options menu, press ▲ to select Connect Truck.
RaceME will try to establish the communication with the ECM. The connection cannot be established because the last updating session has been interrupted. RaceME knows that the last update has not been performed correctly, and will recognise the not operational ECM condition.
RaceME shows the following message:

```
          A previous update has been interrupted
               Press  ▶ to restore ECM to Stock
```

The message is longer than the display, so the message will repeatedly scroll across the screen.
Press the ▶ key. The recovery operation starts. You will see the following message:

```
                    ┌─────────────────────────┐
                    │     PROGRAMMING         │
                    │     Please wait         │
                    └─────────────────────────┘
```

After a few seconds, a numeric counter with the percentage of the transmitted software will appear.
At the end of the transmission (when 100% is reached), RaceME will update the functional parameters of the ECM. The following screen will appear:

```
                    ┌─────────────────────────┐
                    │     Updating ECM        │
                    │     Please wait         │
                    └─────────────────────────┘
```

During the updating session, RaceME can ask to Turn key OFF and Turn Key ON. Please follow these instructions. DO NOT DISCONNECT RaceME before the updating session is completed.
At the end of the recovery operation, the following screen appears:

```
                    ┌─────────────────────────┐
                    │     UPDATE DONE         │
                    │     Unplug RaceME       │
                    └─────────────────────────┘
```

Please, unplug RaceME from the diagnostic port and <u>turn the ignition key off for 15 seconds</u>.
The job is done. The ECM has been returned to the STOCK software and RaceME is no longer VIN# Locked. You're ready to start from the beginning again.

5. **Power on Demand** *(not available for MY 2010 and above)*

This function allows the user to select the preferred power level instantly, also during the driving!
At the PoD menu:

```
                    ┌─────────────────────────┐
                    │  ▲ Power On Demand      │
                    │  ▼ Main menu            │
                    └─────────────────────────┘
```

press ▲ key to enter the Power on Demand function, the Power page will appear:

```
                    ┌─────────────────────────┐
                    │ Power=99                │
                    │                         │
                    └─────────────────────────┘
```

Power can be selected between 99 (full power) and 0 (lower power) through the ▲ and ▼ keys.
Press the ▶ key to confirm the selection.
You have just to release the throttle to apply the new power.
RaceME waits for a new Power on Demand adjustment. To return to the PoD menu, press ◀ key.

6. **Adjusting optional parameters**

Before the programming, RaceME proposes the adjustment of the optional parameters.
To enter this function, press ▼ in the Options menu:

```
                    ┌─────────────────────────┐
                    │  ▲ Connect Truck        │
                    │  ▼ Adjust options       │
                    └─────────────────────────┘
```

The list of optional parameter varies according to the installed software.
The current parameter value is shown on the display. With the keys ▲ and ▼ a new value can be selected.
To confirm the selected value, press the ▶ key.
You can return back one step, in any moment with the ◀ key.

Torque *(not available for MY 2010 and above)*
The Torque selection can be programmed 1 – Stock, 2 - Mild, 3 - Soft (less than #2) or 4 - Light (less than #3).
With the Default torque setting, RaceME chooses it according to the current software level.

```
┌─────────────────────┐
│   Torque=Default    │
│                     │
└─────────────────────┘
```

Injection Timing

The Timing selection can be programmed 1 - Stock, 2 - RaceME-standard, 3 - Advanced (less than #2) or 4 - Mild (less than #3).
With the Default timing setting, RaceME chooses it according to the current software level.

```
┌─────────────────────┐
│   Timing=Default    │
│                     │
└─────────────────────┘
```

At the end of the parameters list, RaceME stores, in its internal memory, the new parameters setting that will be used on next truck programming.

7. Reading Key-on counter *(not available for MY 2010 and above)*

RaceME leaves no footprint, all the trip data stored inside ECM remains untouched. As an example you can verify that the Key-on counter remains stored.

From the main menu, press the ▼ key to select the data read function.

```
┌─────────────────────┐
│  ▲ ECM/ABS Update   │
│  ▼ Data Read        │
└─────────────────────┘
```

From the data read menu, press the ▼ key to select this function.

```
┌─────────────────────┐
│  ▲ Key-on counter   │
│  ▼ DTC codes        │
└─────────────────────┘
```

RaceME will try to establish communication with the ECM.
If the Key was not turned into the on position RaceME will display this message:

```
┌─────────────────────┐
│    Turn key OFF     │
│     Press  ▶        │
└─────────────────────┘
```

Pressing the ▶ key, RaceME asks you to turn on the ignition key to retry the connection:

```
┌─────────────────────┐
│    Turn key ON      │
│     Press  ▶        │
└─────────────────────┘
```

When the connection has been established, RaceME shows the key-on counter:

```
┌─────────────────────┐
│   Key cnt:  567     │
│    Press  ▶         │
└─────────────────────┘
```

Please remember that every time the key is switched off, as at the end of the programming, the key-on counter increases.

8. Reading DTC's

Reading Diagnostic Trouble Codes

The DTC (Diagnostic Trouble Code) reader function present in RaceME Micro Tuner is for convenience purpose only. RaceME makes no warranty to the accuracy of the interpretations.
The description of all the DTC is shown on RaceME's display.
Many logged codes are transitory, they are automatically reset.

From the main menu, press the ▼ key to select the data read function.

```
┌─────────────────────┐
│  ▲ ECM/ABS Update   │
│  ▼ Data Read        │
└─────────────────────┘
```

From the data read menu, press the ▼ key to select this function.

```
▲ Key-on counter
▼ DTC codes
```

RaceME will try to establish communication with the ECM.
If the Key was not turned into the on position RaceME will display this message:

```
Turn key OFF
Press ▶
```

Pressing the ▶ key, RaceME asks you to turn on the ignition key to retry the connection:

```
Turn key ON
Press ▶
```

When the connection is established, if no DTC codes are present, the following screen appears:

```
No DTC stored
Press ▶
```

If one or more DTC's are stored, RaceME shows the number of DTC's present with the following screen:

```
8 DTC present
Press ▶
```

With the keys ◀ and ▶ all the present DTC codes can be displayed, one code at a time with the following screen:

```
DTC #1 . P0108
MAP sensor volta
```

The first line of display shows the DTC "P" code. The second line shows the DTC code description. If the DTC code description is longer that the physical dimension of the display, the description will scroll across the screen.

Clearing DTC codes
At the end of the DTC code list, RaceME can either clear all the stored DTC codes from the ECM memory or exit:

```
▲ Clear DTC
▼ Exit
```

Press the ▲ key, to clear all the DTC codes stored in the ECM.
Press the ▼ key, the DTC codes will not be erased and RaceME will return to the main screen.
When the erasing operation has been completed, the following screen appears:

```
DTC Cleared
Press ▶
```

9. ABS Update
Tire height update
Once RaceME is VIN# Locked (i.e. a software has been loaded in the ECM) the speedometer of the vehicle can be adjusted according to the tire height.
From the main menu, shown below, press the ▲ key.

```
▲ ECM/ABS Update
▼ Data Read
```

To change the tire height, choose the ABS update function:
Press the ▼ key, in the second menu as shown below:

```
▲ ECM Update
▼ ABS Update
```

RaceME will try to establish the communication with the ABS.
If the ignition key was not turned to the "RUN" position RaceME will display this message:

```
Turn key OFF
Press ▶
```

Press the ▶ key, then RaceME will prompt you to turn on the ignition key to retry the connection:

```
Turn key ON
Press ▶
```

When the connection has been established, RaceME shows the current tire height (Curr Tire:) in the top line of the screen:

```
Curr.Tire:40.00.
New  Tire:40.00.
```

Using the up and down arrow, select the correct tire height.
Any tire height from 25.00" to 45.00" can be chosen in 0.05" increments.
After you have selected the correct tire height, press the ▶ key to start the ABS programming.
A typical ABS change will take only a couple of seconds.
When the operation has been successfully completed, the following screen appears:

```
PROGRAM DONE
```

The ABS unit does not always change, so RaceME will re-read the tire height from the ABS unit and display the results as shown in the following screen:

```
Curr.Tire:42.25.
Press ▶
```

If the ABS unit did not change to the new tire height, Press the ◀ key to return to the previous screen, and re-enter the correct tire height.
When the tire height change is completed, press the ▶ key. RaceME will display the following screen:

```
Unplug RaceME
Turn key OFF
```

Please, unplug RaceME from the diagnostic port and turn the ignition key off for 30 seconds.
Notes: To increase the speedometer reading, increase the tire size.
        To decrease the speedometer reading, decrease the tire size.
        The ABS accuracy is questionable. Verify the speedometer reading with a GPS or by pacing a vehicle with a speedometer know to be accurate.

10. Updating RaceME

Both the internal firmware and the tuning data information can be updated through USB connector.
Please see *RaceME* internet site (www.raceme.eu) for more details and software download.

11. Appendix A: Error messages description

This section contains all the possible error messages shown by RaceME:

Error message	Cause	Solution
CAN ERROR #	A problem in the CAN Bus communication	Check connection cable or contact *RaceME* if the problem persists
CCD ERROR #	The communication with ABS unit doesn't work	Check connection cable or check ABS unit
COMM. TIME OUT	The ECM of the vehicle doesn't answer to RaceME	Turn the ignition key on (DO NOT START ENGINE) or Check the connection cable
ECM Changed	The ECM unit of the vehicle has been changed	Restore the original ECM back to STOCK before changing ECM
Empty Memory, Please Update	The last Update operation (through USB port) has been unsuccessfully completed. RaceME memory has been corrupted.	Repeat the Update operation. The data files are available on the *RaceME* internet site.
INTERNAL ERROR #	RaceME internal malfunction	Call *RaceME* assistance
Memory Error	A malfunction in the RaceME's memory	Call *RaceME* assistance
Memory Written Wrong Data File	The update file transmitted to RaceME through USB port is corrupted	Download again the update file from *RaceME* internet site and update RaceME with the correct file
PROGRAM ABORTED	The ECM update function has been interrupted	Restore the ECM to STOCK with the recovery procedure.
S/N Verify Error	The serial number of your vehicle has not been verified	Check connection cable
SW Version doesn't Match S/N	The ECM software version doesn't match with the serial number	Please contact *RaceME* or the seller.
